Client Overview

Hampshire and Isle of Wight Healthcare NHS Foundation Trust is responsible for delivering safe, effective healthcare services across a wide range of clinical and community environments. Maintaining compliant, reliable and low-maintenance estates infrastructure is essential to supporting patient wellbeing, staff safety and uninterrupted service delivery.

Project Overview

The Trust undertook a programme of lighting upgrades across multiple healthcare settings, including wards and sensitive clinical environments. The project required lighting solutions that met strict NHS regulatory standards while offering long-term reliability and value.

Working alongside appointed consultants and delivery partners, Lux Bright supported the Trust by supplying lighting systems designed to meet the operational, safety and regulatory demands of modern NHS estates.

Our Approach

Lighting in healthcare environments must balance regulatory compliance, operational resilience and patient comfort. For this programme, Lux Bright focused on specifying and supplying solutions that could perform **consistently across high-use and sensitive spaces**, while minimising disruption and ongoing maintenance.

Key challenges addressed included:

- Ensuring full compliance with NHS lighting, safety and performance standards
- Providing solutions suitable for secure and sensitive clinical environments
- Reducing lifecycle costs through durable, long-lasting products

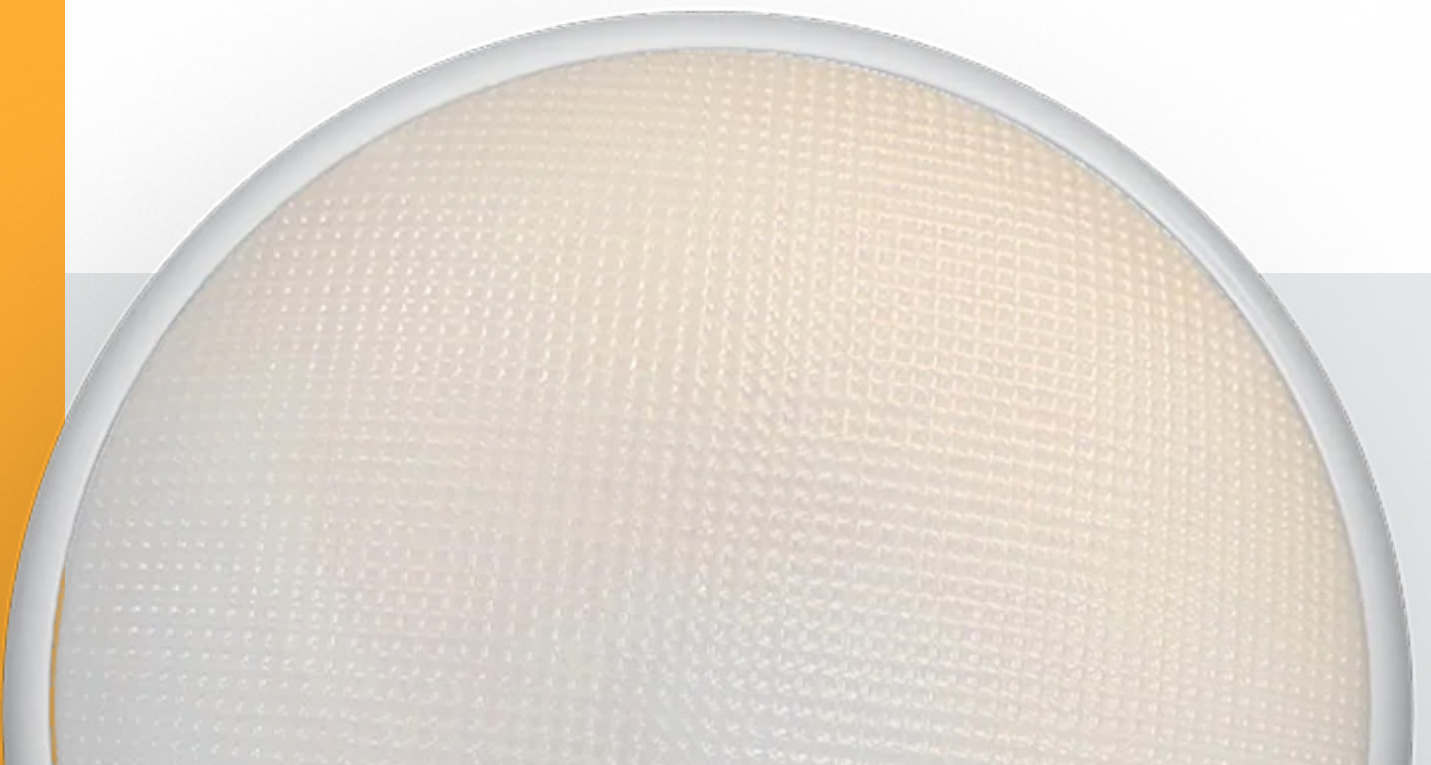

Lux Bright worked collaboratively with project stakeholders to ensure all solutions were aligned with both regulatory requirements and the practical realities of healthcare estates management.

Technical Assurance

All lighting solutions were selected with a strong emphasis on compliance, performance and longevity. **This included:**

- Compliant lighting systems designed to meet current healthcare regulations and standards
- Solutions suitable for secure and sensitive environments, including anti-ligature applications where required
- Robust, durable fittings engineered to reduce replacement frequency and ongoing maintenance demands

The specified systems were designed to deliver consistent performance over extended lifecycles, supporting safe operation while **minimising maintenance intervention and disruption within clinical settings.**

Results

The Trust now benefits from a dependable and fully compliant lighting infrastructure across key healthcare environments. The installed solutions support safe, functional clinical spaces while reducing the need for ongoing maintenance and minimising long-term operational disruption.

By delivering lighting systems designed for durability, compliance and consistent performance, Lux Bright helped support the Trust's estates strategy and the day-to-day demands of clinical environments. **The project demonstrates Lux Bright's capability to deliver robust, long-lasting lighting solutions for complex healthcare settings, including secure and sensitive areas, while providing long-term value and reliability.**
